## KOHLER RiverBath Round & Rectangle whirlpool options

- **Power** - Turns the whirlpool system on and off. Symbols illuminated in blue indicate available modes/features. Modes which are operating will be illuminated in green
- **Outer Ring** - Rotate the outer ring to the desired mode. The selected mode will flash (blue)
- **Activate Button** - Press "OK" to activate the desired mode
- **Up Arrow** - Increases the water flow for the selected mode
- **Down Arrow** - Decreases the water flow for the selected mode
- **Whirlpool Mode** - When active, the mode allows you to adjust the water flow to the 8 Flexjets by pressing the up or down arrows.
- **Waterfall Mode** - When active, a continuous stream of water flows behind your neck. You may adjust the flow volume by pressing the up or down arrows
- **Whitewater Mode** - When active, the 2 outside Riverjets behind your neck will operate, and you may adjust the flow volume by pressing the up or down arrows
- **Rapids Mode** - When active, all 4 Riverjets behind your neck will operate, and you may adjust the flow volume by pressing the up or down arrows
- **Tidepool** - This feature turns off the air flow to the jets for a soothing, relaxing effect. The Tidepool feature may be used at any time while any of the jets are operating. The Tidepool mode does not affect the Waterfall
- **Heater** - The heater automatically engages when the whirlpool is turned on. To turn the heater off, rotate the outer ring until the heater mode is flashing and press "OK". Press "OK" again to turn the heater back on. The heater will help to maintain the water temperature up to 104°F (40°C)
- **Indicator Bar** - Shows the water flow volume in each mode

**Easy Assembly** - All equipment is factory pre-assembled. Only the electric supply cables need to be connected.

**Care & Hygiene** - System drains by means of gravity. The suction strainer, side, and rotating jets are removable for complete care. All pipework is designed to run to the lowest point and all flexible pipe work is smooth bore for maximum drainage. Meets the BS standard for water retention.

**Safety** - Water level detection device to prevent operation if the bathtub is empty or there is not enough water.

**Note** - Hot water supply should be a minimum of 70% of capacity.
